Evapotranspiration Predictability using Machine Learning

Review by
Archie BENN

Supervisor
Professor Martin DE KAUWE

Abstract

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum. It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'lorem ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).

Key words: Machine Learning, FLUXNET, Evapotranspiration.

Contents

1 Introduction

1.1 Energy consumption in manufacturing industry

For governments and manufacturing companies, global warming, rising energy prices, and customers increasing ecological awareness have pushed energy efficient manufacturing to the top of the agenda. The integrating energy efficiency performance in production management, gap analysis between industrial needs and scientific literature. Manufacturing companies need greater capabilities to respond more quicker [1] to market dynamics and varying demands. It is obvious that energy efficiency becomes a driver for manufacturing industry, since it has become one of the greatest energy consumers and carbon emitters in the World, higher than transportation, residential and commercial usage. Like shown in Figure
