

UNIVERSITY OF BRISTOL
MSc BIOINFORMATICS

**Evaluating Evapotranspiration Generalisation Under a
Changing Climate using Machine Learning**

Author

Archie BENN

Supervisor

Professor Martin DE KAUWE

ABSTRACT (The abstract has a maximum of 200 words)

Key words: Machine Learning, FLUXNET, Evapotranspiration.

Word count: 3000

CONTENTS

Literature Review (~ 1750 words)	3
Evapotranspiration and The Water Cycle	
<i>(Why does the water cycle matter?)</i>	3
Evapotranspiration	3
Eddy Covariance	3
The Changing Climate	
<i>(How is the water cycle changing?)</i>	3
Evapotranspiration Prediction	
<i>(What don't we know and what are the issues?)</i>	3
Contemporary ET Prediction Methods	3
Machine Learning Models for ET Prediction	3
Project Scope and Machine Learning Applicability	
<i>(What is the case for using ML here?)</i>	3
Project Scope	3
Why is ML applicable here?	3
Research Project Plan (~ 1000 words)	4
Overall Project Aim	4
Methods Overview	4
Data Acquisition and Selection	4
Feature Engineering	4
ML Model Setup and Training	4
ML Model Evaluation	4
ML Model Predictions	4
Gantt Chart	4
Risk Register (~ 250 words)	5

LITERATURE REVIEW (~ 1750 WORDS)

EVAPOTRANSPIRATION AND THE WATER CYCLE

(Why does the water cycle matter?)

Evapotranspiration

Eddy Covariance

THE CHANGING CLIMATE

(How is the water cycle changing?)

EVAPOTRANSPIRATION PREDICTION

(What don't we know and what are the issues?)

Contemporary ET Prediction Methods

Machine Learning Models for ET Prediction

PROJECT SCOPE AND MACHINE LEARNING APPLICABILITY

(What is the case for using ML here?)

Project Scope

Why is ML applicable here?

RESEARCH PROJECT PLAN (~ 1000 WORDS)

OVERALL PROJECT AIM

METHODS OVERVIEW

Data Acquisition and Selection

Feature Engineering

ML Model Setup and Training

ML Model Evaluation

ML Model Predictions

GANTT CHART

Figure 1: A proposed Gantt Chart for the duration of this project.

RISK REGISTER (~ 250 WORDS)

REFERENCES
